IMPORTANT NOTE!!! Notice the “Save” button above the facts that were entered. Be sure to press that “Save” button or the facts will not be saved by the application.

Step 7: Generate your XBRL taxonomy schema, linkbases, and XBRL instance.

After you have successfully entered all your term, label, structure, association, and rule information; then you can generate your XBRL taxonomy. This will include the XBRL taxonomy schema and the XBRL linkbases that will support your report.

To generate the XBRL taxonomy information, from the menu ribbon select “File” and then “Save as XBRL”. The following standard Windows dialog box will appear which will let you save your file.

In the “File name:” text box of the form, enter “common.xsd” which will be the name of your XBRL taxonomy schema file.

Step 7: Verify that your XBRL is correct.

Luca does not provide XBRL syntax verification. And so, to validate the XBRL taxonomy and XBRL instance that you created, you will have to use an XBRL processor that provides XBRL, XBRL dimensions, and XBRL Formula validation.

If you validate the XBRL files using your favorite XBRL processor, you should see that you have no errors:

XBRL Validation Report

| Severity | Count |
|---------------|----------|
| Error | 0 |
| Warning | 0 |
| Inconsistency | 0 |

No Errors!

This is what the XBRL taxonomy looks like in Pesseract³:

The screenshot displays the Pesseract software interface for viewing an XBRL taxonomy. The main window is titled 'Taxonomy (common.xsd) - Pesseract'. The interface includes a menu bar (File, Home, Options and Preferences, Tools, View, Knowledge Base, Debugging, Windows, Help) and a ribbon with various tool icons. The central area is divided into two panes: 'Presentation View' and 'Calculation View', both showing a tree structure of elements. Below these panes is a search bar and a table of elements. The table has columns for Prefix, Label, Name, Element T..., Data Type, Balance, and Period Type. The 'Assets' element is highlighted. On the right side, the 'Element Properties' pane shows details for the selected 'Assets' element, including Name, Type, Substitution Group, Period Type, Balance, Abstract, Niltable, and Prefix.
